vetbed[™]
GOLD

Vetbed[™] GOLD is a new unique veterinary bedding, the first of its kind in the world. It is a development of Vetbed[™] ORIGINAL, and has all the same benefits of this market leader, plus extra properties that make it particularly beneficial to the veterinary profession and domestic user alike.

The pile of Vetbed[™] GOLD is luxuriously thick – even thicker than Vetbed[™] ORIGINAL. It is made incorporating a substance called Permafresh[™] Fibre, which migrates into the fibres, continually releasing molecules that work against bacteria and fungi, ensuring a longer, fresher life for the bedding.

Permafresh[™] Fibre is a safe, non-toxic integral agent which is continuously released over the lifetime of the bedding. It will provide 100% effective control of bacteria, mould, mildew and fungi – often the cause of smells and odours, and help to create a more hygienic environment.

Because of its work against bacteria etc. dead skin (both human and animal) is prevented from decaying, which means that the common dust mite is starved, and consequently dies.

This is of tremendous benefit to animals that are house dust mite sensitive, or that generally suffer from skin allergies.

Permafresh[™] Fibre is unique and has been extensively tested to prove it will prevent the growth of destructive bacteria, moulds, mildew and fungi, and kill the dust mite.

Permafresh[™] Fibre is approved by the US Environmental Protection Agency (EPA).

Washing Instructions

A light brushing whilst damp and allowing to hang dry will help to maintain the condition of your Vetbed[™] GOLD.

Vetbed[™] GOLD has a yellow backing, and is available in white, red, grey and blue.

Sizes available
